

#### Алгоритмы программирования и структуры данных

Поиск подстрок

# Поиск подстрок (часть 5). Алгоритм Бойера — Мура

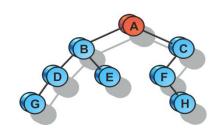

#### Время работы алгоритма Бойера - Мура

На «плохих» данных: O(NM) На «хороших» данных: O(N / M)

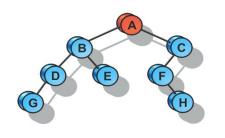

# КОРАБЛИ ЛАВИРОВАЛИ <u>Р</u>ОВ

#### Код. Построение таблицы плохих символов

#### Код. Поиск подстроки

```
i = 0
while i <= n - m:
  j = m - 1
  while S[i + j] == T[j]:
    if j < 0:
      return i
  i += max(j - pos[S[i + j]], 1)
return -1
```

#### Таблица хороших суффиксов

# **Код.** Построение таблицы хороших суффиксов

```
suf = [-1] * m
for x = 0..m - 2
 i = x
  j = m - 1
  while i > 0 \&\& T[i] == T[j]:
    suf[j] = i
```

#### Код. Поиск подстроки

```
i = m - 1
while i < n:</pre>
  j = m - 1
  while S[i] == T[j]:
    i--, j--
    if j == 0:
      return i
  i += j + 1 - suf[j + 1]
return -1
```

#### Совместное использование эвристик

```
i = m - 1
while i < n:
  j = m - 1
  while S[i] == T[j]:
    i--, j--
    if j == 0:
      return i
  i += \max(j + 1 - \sup[i + 1],
           j - pos[S[i + j]])
return -1
```
